

COVID-19 Screening/Education

Special Offer

Overview

In just a few days, Sense.ly can work with you to launch a customized web widget, featuring a unique avatar and speech-based interface, that you can deploy broadly to your members.

Using a risk algorithm based on guidance from the UK's National Health Service, the tool is intended:

1. To reduce transmission risk by keeping potentially infected people out of hospitals and clinics
2. To provide a digital screening that keeps call volume at a manageable level, ensuring those that need care can receive it
3. To collect broad and more accurate data

Solutions have already been launched in Switzerland, Japan, the UK, and the U.S., with over 160,000 uses to date. Please see recent press announcement [here](#).

Try our comprehensive english demo:
covidconsult.com

Supported Languages Include:

English, French, Italian, German, Arabic, Spanish, Portuguese, Japanese, Traditional Chinese, Simplified Chinese, Russian, Polish, Dutch, Hindi, Thai, Bahasa

Customization

Working with your team, each deployment can be customized to your preferences for:

- Rules & risk criteria
- Links to existing web-based educational material
- Language localization

Distribution

As a web-based tool, the Sense.ly system **does not** require the user to create an account or download a mobile app, giving you the widest latitude on how to make the solution available to your members. Here's a sampling of what others are doing:
